Red Alert Drowsiness System

TT SMART VISION CO., LTD.

Today we will find that many motorists on the road Have to endure stubbornness with little rest Or some people do not sleep and drive Which all of this All of the causes that cause sorrow or sleep while driving. As a result, there was only a panic when the car was about to run off the path to the side lane. To the road accident Which brought many casualties Especially during the long holiday season, many people have to drive to travel back to their homeland. Or driving a tourist car that has a long distance This also includes a van driver career. Public buses that need to drive to pick up passengers who travel a number of trips per day Are all at risk of falling asleep.

The Red Alert Drowsiness System is a tool to help alert drivers who are in opiates. Or such risk conditions do not randomly risk accidents The program is designed to save lives and prevent misfortunes and losses that may occur to life, property of individuals and organizations. The program is developed on the Android operating system to be able to monitor Which can be notified immediately When detecting risk behavior.
